

Yago Tomaszewski de Souza

Data scientist and systems architect spanning computer vision, scheduling optimisation, and high-throughput API platforms. Fluent from model design to deployment.

Lisbon, Portugal

SELECTED IMPACT

- Built an OCR engine from scratch in pure Python in 3 weeks whose accuracy rivalled the most expensive commercial equivalent in Brazil at the time.
- Participated in the design and deployment the API layer processing **60%+ of Sodexo's global payment transactions** from Brazil, maintaining production on-call for 3+ years.
- Reduced API time-to-production to **~6 weeks** at BNP Paribas across rotating teams spanning APAC, EMEA, and LATAM.
- Currently shipping a computer-vision toll system and a scheduling optimisation model for train workshop allocation — both in production.

EXPERIENCE

Data Scientist — Motiva Lisbon, Portugal | Sep 2025 - Feb 2026

- Built image recognition pipeline for vehicle identification on paid road tolls. Also recognized vehicles of emergency services, government agencies and from own fleet.
- Designed and shipped a scheduling optimisation system (MILP) for train workshop allocation, generating maintenance schedules from operational constraints.

API Architect — BNP Paribas Lisbon, Portugal | Nov 2023 - Mar 2025

- Led API onboarding for rotating cross-regional teams (APAC, EMEA, LATAM), driving integrations to production in ~6-week cycles with full security and design compliance.
- Supported PoC development and legacy API migrations under diverse environment constraints.

Integration Architect — Sodexo Barueri, Brazil | Mar 2019 - Aug 2023

- Designed APIs for core applications interfacing with the global payment layer, covering **60%+ of Sodexo's global transaction volume** from Brazil.
- Maintained CI/CD pipelines (Docker, Kubernetes, Terraform) and owned production on-call for 3+ years; served as technical bridge between architecture and analytics teams, including ETL and data scripting work.

Data Scientist — Stefanini Labs São Paulo, Brazil | Oct 2018 - Mar 2019

- Built ML PoCs for banking and telecom; OCR engine from scratch in pure Python in 3 weeks, matching accuracy of the leading commercial product in Brazil.

Junior Data Scientist — Digisystem São Paulo, Brazil | Jan - Oct 2018

- Prepared, modelled, and deployed ML pipelines and production chatbots for large-scale retail.

Integration Consultant — Certsys São Paulo, Brazil | Sep 2016 - Feb 2017

- Designed integration and messaging systems for logistics and retail; owned production monitoring.

SKILLS

ML / Data	Python (pandas, scikit-learn, PySpark, boto3), computer vision, scheduling optimisation, ETL
Backend	Go (Gin, Echo), Node.js/TypeScript, Django, REST, GraphQL, WebSockets, message queues
Infrastructure	AWS (Lambda, API Gateway, S3, EC2, CDK, SQS), Docker, Kubernetes, Terraform, CI/CD
Databases	PostgreSQL, MSSQL, Oracle, MongoDB, DynamoDB, Redis
API platforms	Apigee, MuleSoft, Kong, IBM ACE, OAS/Swagger
Languages	Portuguese (native) English (fluent)

EDUCATION

Applied Mathematics & Data Science — Prandiano Museum of Mathematics	2017 - 2023
Computer Systems — FITO Technical Institute, Osasco	2011 - 2014
